EDUCATION

Bachelor of Technology, Computer Science Engineering | Amrita Vishwa Vidyapeetham, Amritapuri
India | September 2022 to 2026 | CGPA: 8.05/10.0 | Coursework: Data Structures and Algorithms, Operating Systems, Computer Networks, Databases, Machine Learning, Big Data Analytics, Cryptography

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, TypeScript, C++, SQL, Java, HTML, CSS, Bash

Frameworks and Libraries: React, Redux, NumPy, Pandas, RoBERTa, SHAP, LIME, NetworkX

Cloud and Infrastructure: Google Cloud Platform, Firebase, Firestore, BigQuery, Amazon Web Services, Docker, MongoDB, REST APIs

Tools and Methods: Git, Linux, Jira, Tableau, Agile, Scrum, code review, end-to-end product ownership

WORK EXPERIENCE

Front-End Development Intern | Paramount Solutions

Remote | January 2026 to Present | React, TypeScript, Git, Jira

- Contribute reusable React and TypeScript components to the production codebase; streamlined component architecture across 2 feature areas, cutting code duplication by an estimated 30%.
- Collaborate in sprint planning, code reviews, and agile ceremonies within a cross-functional engineering team, accelerating delivery cycles.

Web Development Intern | Infospica

Trivandrum, India | August 2024 | WordPress, HTML, CSS, JavaScript

- Delivered a hospital appointment booking website end-to-end within a 1-month internship, enabling patients to browse 10+ doctor profiles and schedule consultations online.
- Produced a fully responsive cross-device UI by customising WordPress themes and plugins, reducing reported layout issues to zero.

PROJECTS

Cloud-Native Renewable Energy Marketplace | Google Cloud Platform, Python, Firebase, Firestore, BigQuery

July 2025 to October 2025

- Engineered a peer-to-peer renewable energy trading platform on Google Cloud Platform, taking full ownership from data model design through cloud deployment with modular service architecture.
- achieved 40% improvement in market efficiency versus static pricing baselines.** Created an AI-driven dynamic pricing engine using machine learning on demand, supply, and weather signals —

Bias-Aware and Explainable Fake News Detection System | Python, RoBERTa, SHAP, LIME, Pandas, NumPy

April 2025 to June 2025

- Developed an end-to-end natural language processing pipeline on the WELFake dataset (~72,000 articles) using RoBERTa; incorporated SHAP and LIME explainability after stakeholder sessions revealed word-level attribution was the core requirement.
- Acted as Business Analyst in Scrum, translating ambiguous requirements into technical specifications and aligning outputs with non-technical stakeholders.

Secure Reinforcement Learning Based Adaptive Time Synchronisation | Python, Docker

May 2025 to August 2025

- Architected a reinforcement learning based time synchronisation mechanism for distributed systems; containerised with Docker to simulate NTP spoofing, Sybil, and Byzantine fault scenarios.
- 35-40% reduction in average clock drift versus static baselines.** Integrated anomaly detection and dynamic peer trust scoring for autonomous identification and isolation of malicious nodes —

CERTIFICATIONS

- AWS Academy Graduate, Cloud Foundations, Amazon Web Services, 2026
- CompTIA Network+, Network Services and Data Centre Architectures, Infosys Springboard, 2025
- Data Analytics Job Simulation, Deloitte Australia, Forage, 2025
- Investment Banking Job Simulation, Citi, Forage, 2025

ADDITIONAL

Languages: English, Malayalam, Hindi

Hackathon: Evolumin, led team building HealthHope healthcare platform

Student Social Responsibility (SSR) – Conducted a hands-on workshop on Web Development and Career Guidance for Grade 11 students at Lightland Higher Secondary School, Oachira.
